

VERDIQ - PROJECT EVIDENCE PACKAGE

Narmada Solar Initiative | Project ID: 3
DEMO / PROTOTYPE DOCUMENT - NOT A CERTIFICATION

Project field	Submitted information
Project name	Narmada Solar Initiative
Project type	Renewable Energy
Location	Madhya Pradesh, India
Expected annual credits	3,000 tCO ₂ e-equivalent credits (prototype estimate)
Project status	Prepared for verification
Developer organization	Green Future Ltd

1. Project Description

Narmada Solar Initiative is a demonstration renewable-energy project proposed in Madhya Pradesh, India. The concept is to generate electricity from solar resources and displace a portion of electricity that would otherwise be supplied from higher-emission generation sources. This document is prepared solely for demonstrating the Verdiq project registration and auditor-review workflow.

2. Project Objectives

- Increase renewable electricity generation.
- Reduce associated greenhouse-gas emissions from electricity supply.
- Establish a traceable project record for future verification.
- Maintain supporting evidence for audit and monitoring activities.

3. Proposed Project Activities

- Solar photovoltaic system deployment and commissioning.
- Electricity generation monitoring through metering equipment.
- Periodic maintenance and operational inspections.
- Collection of generation and performance records for monitoring.

4. Preliminary Emission-Reduction Estimate

The project has been assigned an expected annual credit quantity of 3,000 for prototype demonstration purposes. This figure is an illustrative estimate entered by the developer and must not be interpreted as a verified credit issuance quantity. A real project would require an approved methodology, verified baseline and monitoring data, and an independent validation/verification process.

5. Monitoring Plan

The proposed monitoring approach includes recording electricity generation, equipment uptime, meter readings, maintenance events, and other project-performance evidence. Source records would be retained so an auditor can reconcile reported activity with supporting documentation.

6. Evidence Included

This package is intended to demonstrate the document-upload and auditor-review functions of the Verdiq prototype. It does not establish ownership, financial performance, environmental claims, or verified carbon-credit eligibility.

7. Verification Notes for Auditor

The auditor reviewing this prototype submission should evaluate the completeness and internal consistency of the submitted project description and evidence. Any approval decision in the demo should be understood as a software-workflow demonstration rather than a real-world verification determination.

8. Developer Declaration

The developer declares that the information in this demonstration package is provided for testing the Verdiq application workflow. Any real-world project would be expected to provide authentic supporting records and comply with the applicable carbon-accounting and verification requirements.

Prepared for: Verdiq prototype demonstration

Document type: Supporting project evidence

Status: Demo / Prototype
